

An innovative post-trade monitoring and reporting tool designed for banks, non-bank financial institutions and multinational corporations to efficiently manage executed FX trades through timely, consolidated reporting across all counterparties.

# CLSTradeMonitor

**Improving post-trade efficiency in an evolving and fragmented FX market is a priority for market participants leading to a heightened focus on transparency through the trade lifecycle. However, the lack of established and standardized post-trade consolidated reporting tools can increase operational risk and limit visibility.**

CLSTradeMonitor is a post-trade monitoring and reporting tool that provides a single view of all trade instructions submitted to CLS. Providing enhanced transparency, CLSTradeMonitor is a reliable mechanism to reduce operational risk.

## The benefits

- Get a clear perspective of trade status through a consolidated view of all your trade instructions submitted to CLS across all your CLS products, custodians and counterparties
- Ensure early issue detection and resolution through near real-time trade status update of all details and timelines to investigate and resolve trade breaks
- Improve operational efficiencies with built-in-data filters and sorting functionality to help customize your historic data for reporting, auditing and analytical purposes by simply exporting to your trade management systems
- Customize and automate your workflow – receive post-trade status updates over a secure, platform-agnostic API or a simple web user interface enabling global remote access with seamless integration into your systems

## Improves:

- > Post-trade operational transparency
- > Trade exception monitoring

## Reduces:

- > Operational risk
- > Process inefficiencies

### Get the complete picture

We are pleased to offer CLSTradeMonitor with CLSNet as a combined value-add offering. We recognize that the cost of settling non-CLS currencies is higher than for CLS currencies. The combined solution allows you to drive operational process efficiencies, such as optimizing intraday liquidity, enabling real-time awareness of currency and counterparty exposures, and reducing operational and credit risk.

This powerful solution set enables you to access a holistic view of all your FX trades – multilateral and bilateral – for optimal post-trade efficiency.

### Potential market use cases

Trade and settlement operations:

- Optimally monitor all trades up to settlement date, identify trade breaks, take remedial action and facilitate timely settlement
- Consolidate your interactions with CLS providers into one view
- Improve your post-trade reporting efficiencies.

CLSTradeMonitor is also available through a partner application, TradeNeXus<sup>SM</sup>.

The screenshot displays the CLSTradeMonitor 'Trade List' interface. At the top, there's a search bar and filter options, including 'Trade Status: (1)' and 'Value Date: 20/Nov/2020 - 20/Nov/2120'. The main table lists trades with columns for CLS Reference, Originator Reference, Session, Trade Date, and Trading Partner. A context menu is open over the table, showing options like 'Reset to default view', 'Setting Today', 'Settling Next Week', 'Custodian 1', and '+ Save View'. The footer includes the CLS logo and contact information.
